Age Distribution

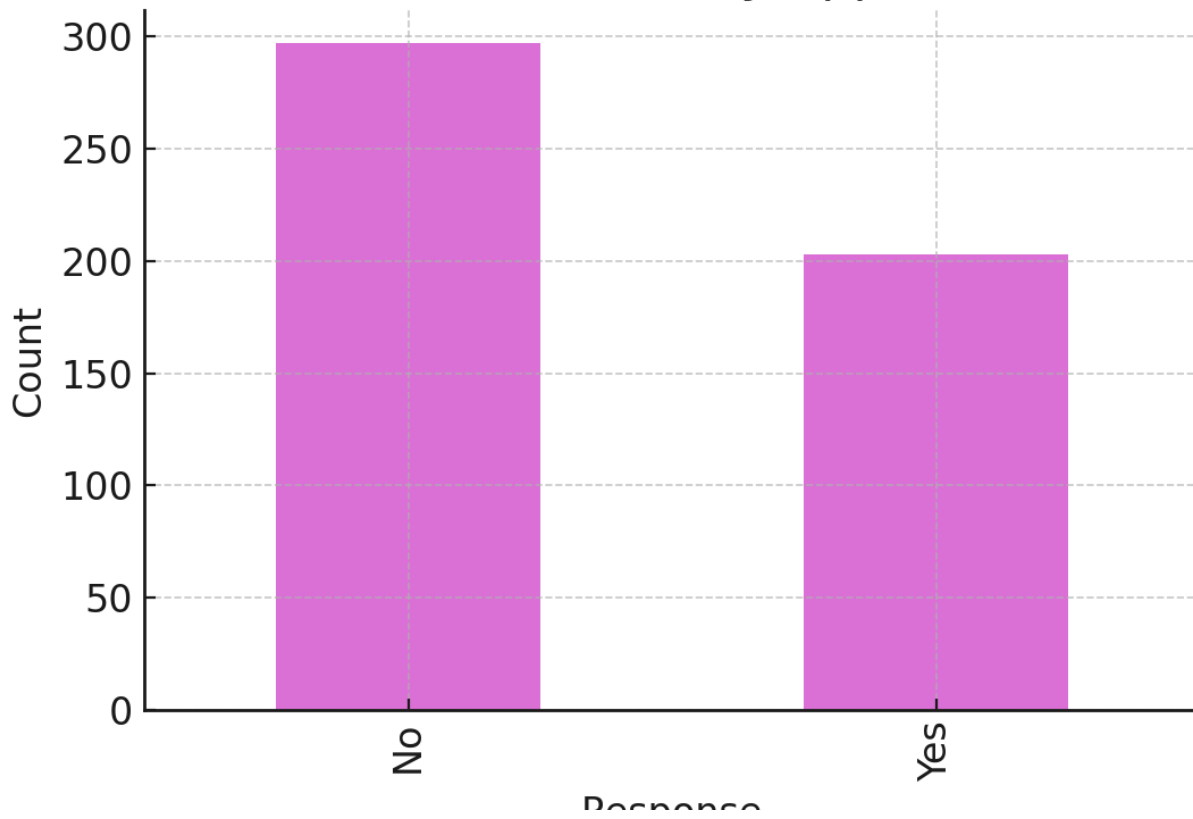

How Safe Do You Feel?

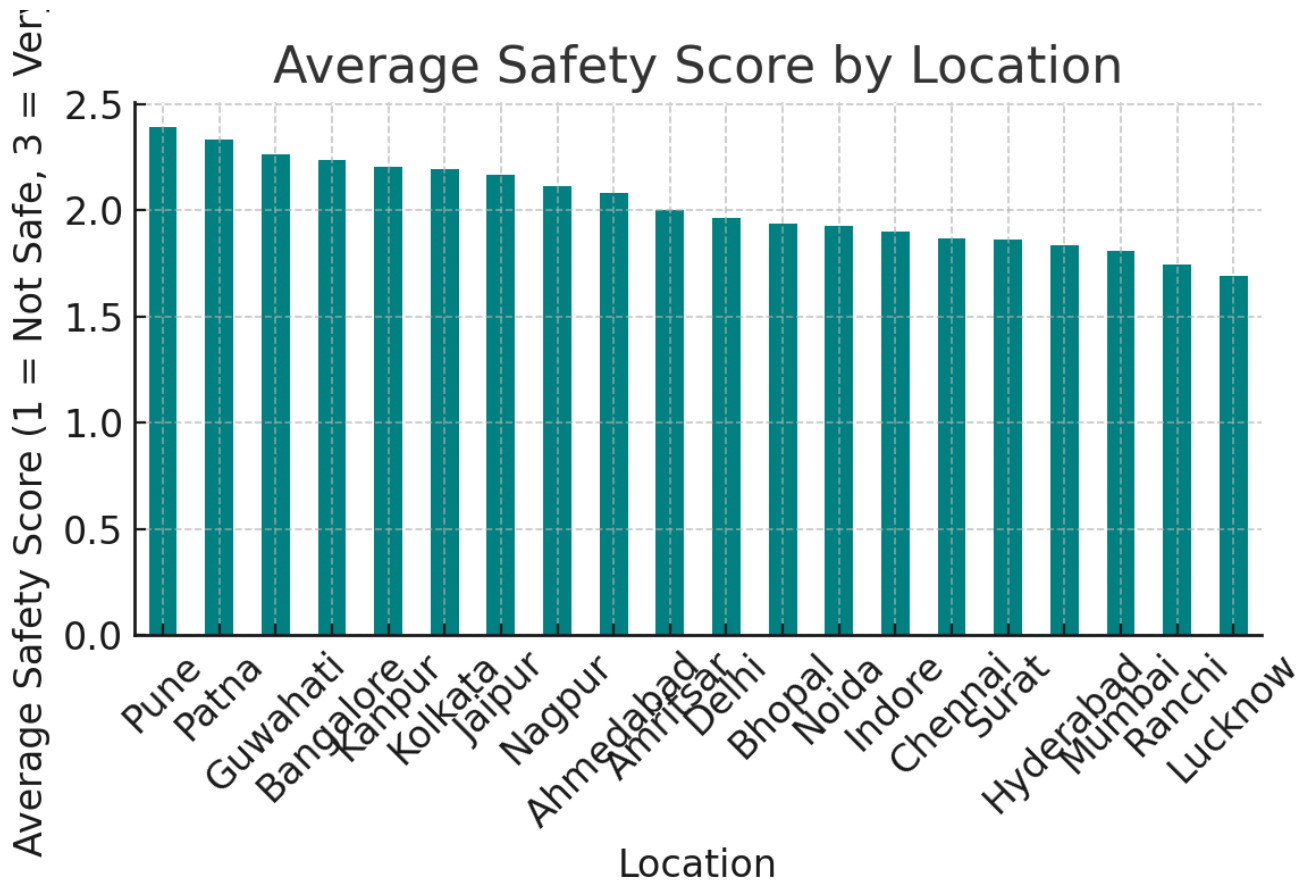

Emergency Number Awareness

Use of Safety Apps

Average Safety Score by Location

Conclusion

The survey reveals important insights into women's perceptions of safety across various cities in India. While a significant portion of women feel safe, there is still a notable percentage who either do not feel safe or are not using available safety tools. Awareness about emergency numbers is relatively high, but the adoption of safety apps remains low in some regions.

This data can help stakeholders and authorities improve safety measures, promote digital safety solutions, and educate the public on emergency preparedness.
